

## SafeLine SL6+ FIRE Fire intercom in combination with a lift emergency telephone system – for easy fire safety in smaller buildings

\*SL6-FIRE

The SL6, besides the regular emergency telephony, can also be used as a unit for fire communication. In an emergency, rescue-personnel located on separate floors can then easily communicate with each other and the distressed in the lift car – using the same voice stations as for telephony. A separate key switch is then also installed for the SL6, allowing the units to be activated during an emergency.

Using the same main unit for both fire intercom and telephony has several benefits. By connecting up to six voice stations to only one unit instead of several and combining the fire intercom stations with telephony, cabling is reduced to a minimum while still allowing for great coverage in the whole building – cost effective and time-saving for the installer.

## Technical information

Supports fire intercom  
Connect up to six voice stations  
Built-in wireless configuration  
Optional GSM-functions  
Wide range of voice stations

## Technical data

### Power supply

230 VAC

### Battery

12 VDC, 1,2 Ah

### Relay

Max 1 A/30 VDC

### IP

IP20

### Inputs

10-30 VDC, 5 mA

### Antenna connection

SMA

### Effect

230VAC, 6-10W

### Size (HxWxD)

241 x 160 x 47 mm (L x W x H)

### Weight

1700 g
